

Selection Driver Risk Index™

Companies need to recruit safe drivers but cannot predict whether new drivers will demonstrate safe attitudes and behaviour on the job.

The Selection Driver Risk Index™ is a psychometric assessment that provides you with a robust and validated approach for the recruitment and selection of safe and responsible drivers.

- Assess individual drivers' strengths and weaknesses via a 20 minute online assessment
- Receive a comprehensive report for each driver, covering a range of situational, behavioural and coping risk factors
- Implement the Selection Driver Risk Index™ immediately with our complimentary guide to interpreting reports
- Manage your recruitment and selection process with DriverMetrics® Management Information System
- If required, improve the identified weaknesses in individual driver behaviour via DriverMetrics® eLearning and online workshops and personal coaching

Selection Factors

Some drivers may be motivated to save time by speeding to meet scheduled deadlines and take risks due to time pressures. The selection factors detect the psychological competences drivers need to cope well with the demands of driving for work.

The factors assessed include:

Situational Risk Factors

- Age
- Annual Mileage
- Driving Hours
- Driving Experience
- Licence Status
- Crash History

Behavioural Risk

- Aggression
- Thrill Seeking
- Fatigue Proneness
- Hazard Monitoring
- Dislike of Driving

Coping Risk Factors

- Confrontive Coping
- Avoidance Coping
- Task Focus Coping
- Reappraisal Coping
- Emotional Coping

Research Evidence

The Driver Risk Index™ is the subject of over 90 published academic papers. It has reliably been shown that the scales measure personality-based emotional responses to driving. These scales are associated with crashes, errors, driver behaviours and reactions behind the wheel. You can find the full publication list at www.drivermetrics.com/publications

DriverMetrics® Risk Assessment

Thank you for completing the DriverMetrics® Risk Assessment, our unique research-based psychometric driver risk assessment. DriverMetrics® is dedicated to reducing road traffic crashes by scientifically assessing driver risk.

You have taken the first steps to identifying and understanding your individual risk and how to become a safer driver.

Your Details: User Test

Assessment Date	29/Jul/2018
Start Time	12:52
Finish Time	12:54
Age	38
Licence Check	6 Months
Company	MIS demo FDR v5
Department	Company

Summary of your Risk Assessment

Your DriverMetrics® Risk

What is the purpose of the DriverMetrics® Risk Assessment?
As drivers we all have the potential to be involved in a crash or other incident on the road. The way we think about driving and our view of what places on the road are more dangerous than others can highlight the extent to which your beliefs and driving actions may increase your potential of being involved in a crash at work.

How does the DriverMetrics® Risk work?
Your responses to the DriverMetrics® Risk Assessment questions have been used to determine your individual driving risk profile in relation to how several thousand other company vehicle drivers have responded (high, medium or low). Your relative scores are shown in the graphs below. Your scores are then combined to produce your overall driving risk profile.

Please remember that a high risk rating does not automatically mean you are a bad driver on the road. Likewise a low risk rating does not mean that there is little or no risk in your driving. It is important that you continue to work towards reducing all sources of risk.

The DriverMetrics® Risk Assessment factors fall into two groups: Situational and Behavioural. Risk, and measure experience, time spent behind the wheel and a number of behavioural and emotional reactions to driving.
